Verify BIOS virtualization is enabled

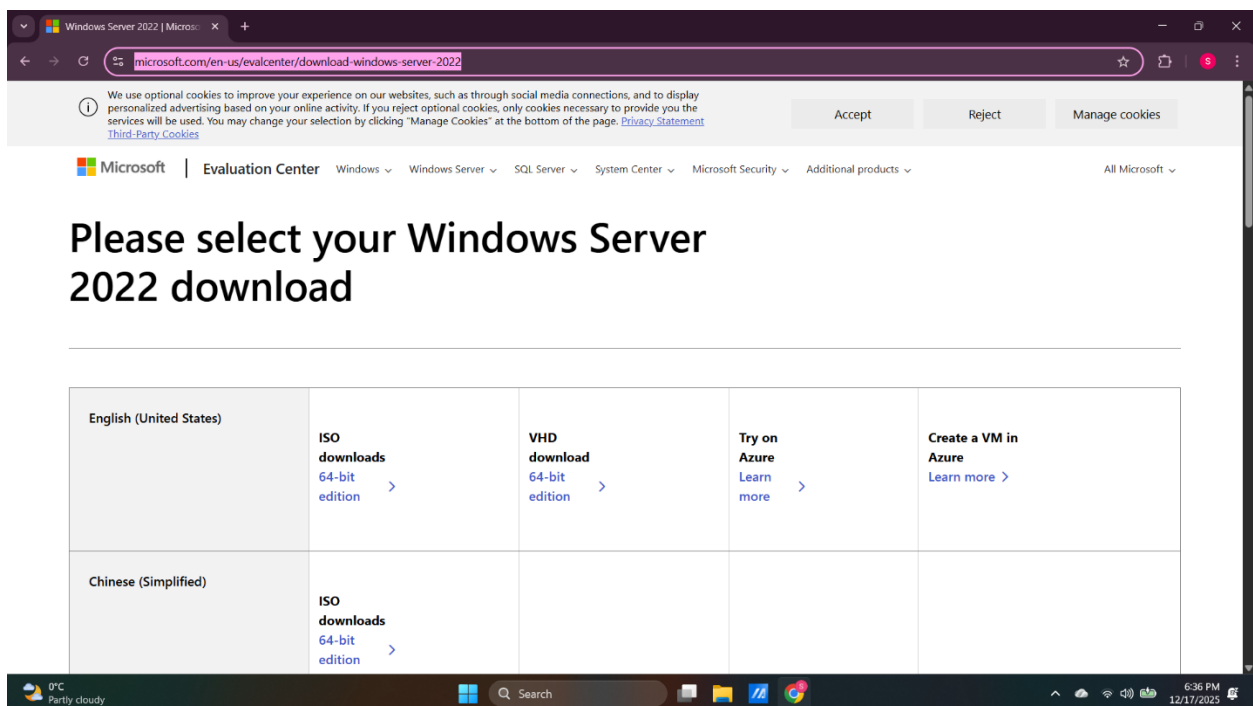

First, I pressed windows key and looked for the task manager.

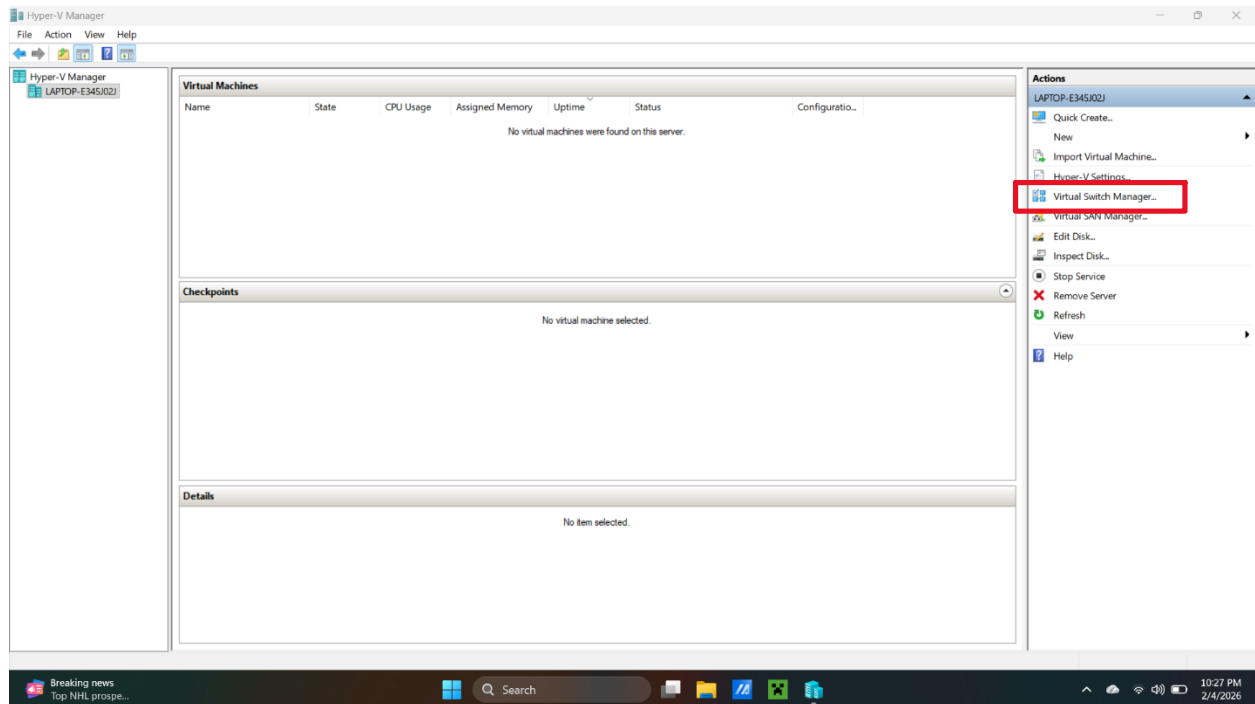

After that, I checked if the virtualization is enabled or not. For my case, it was enabled already.

Downloading ISO file

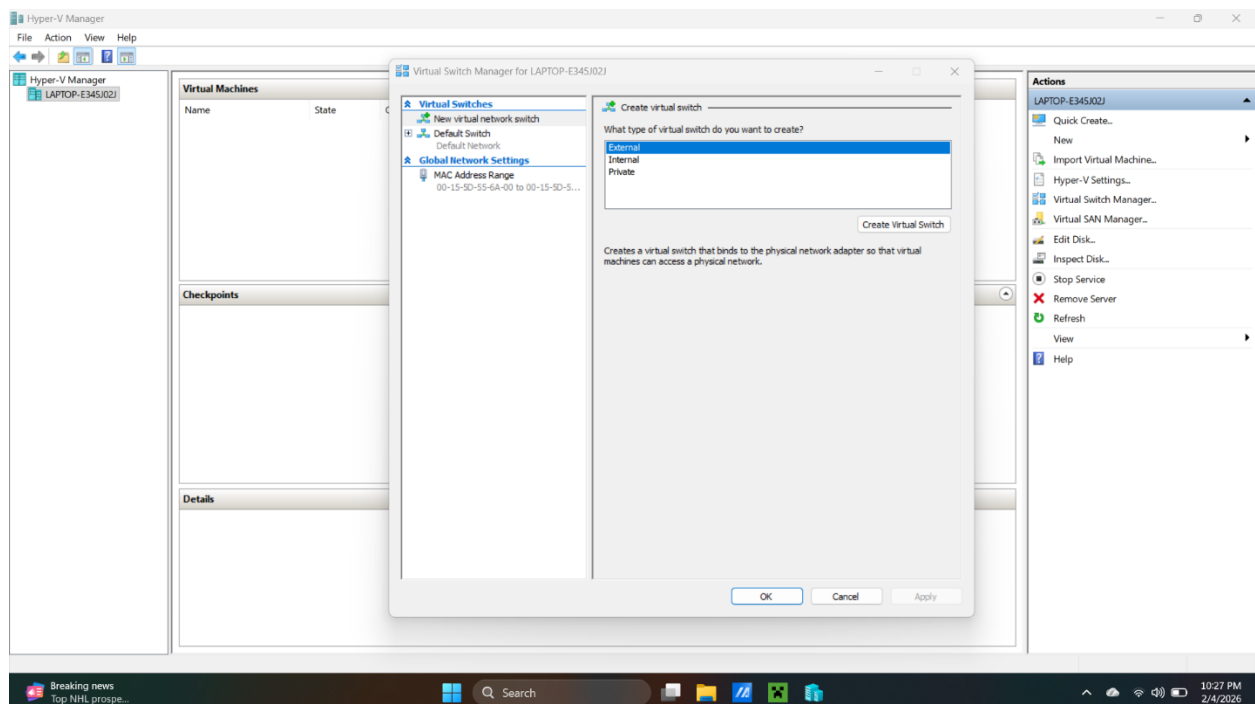

I downloaded the Windows Server 2022 ISO from the Microsoft official evaluation center.

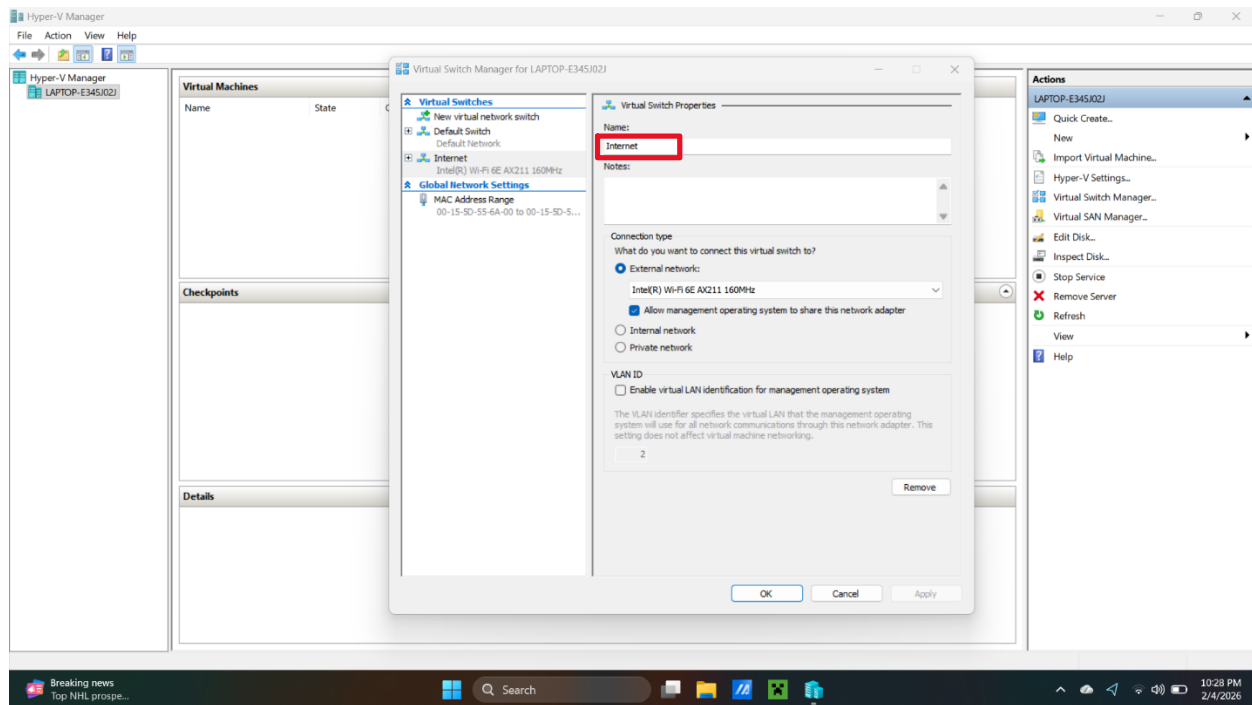

Creating virtual switch

After downloading Iso file, I opened Hyper-V. Then I clicked on virtual switch manager.

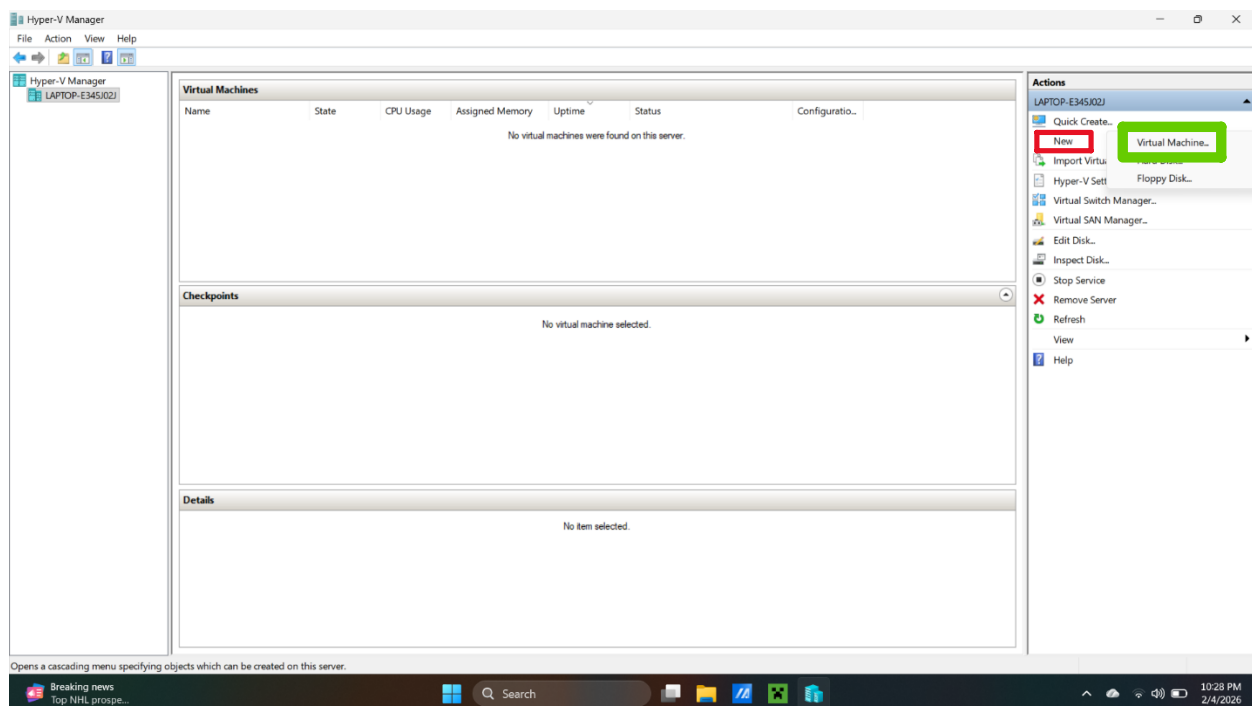

After that, I created a virtual switch and in type I selected external for accessing internet which is needed in later phase.

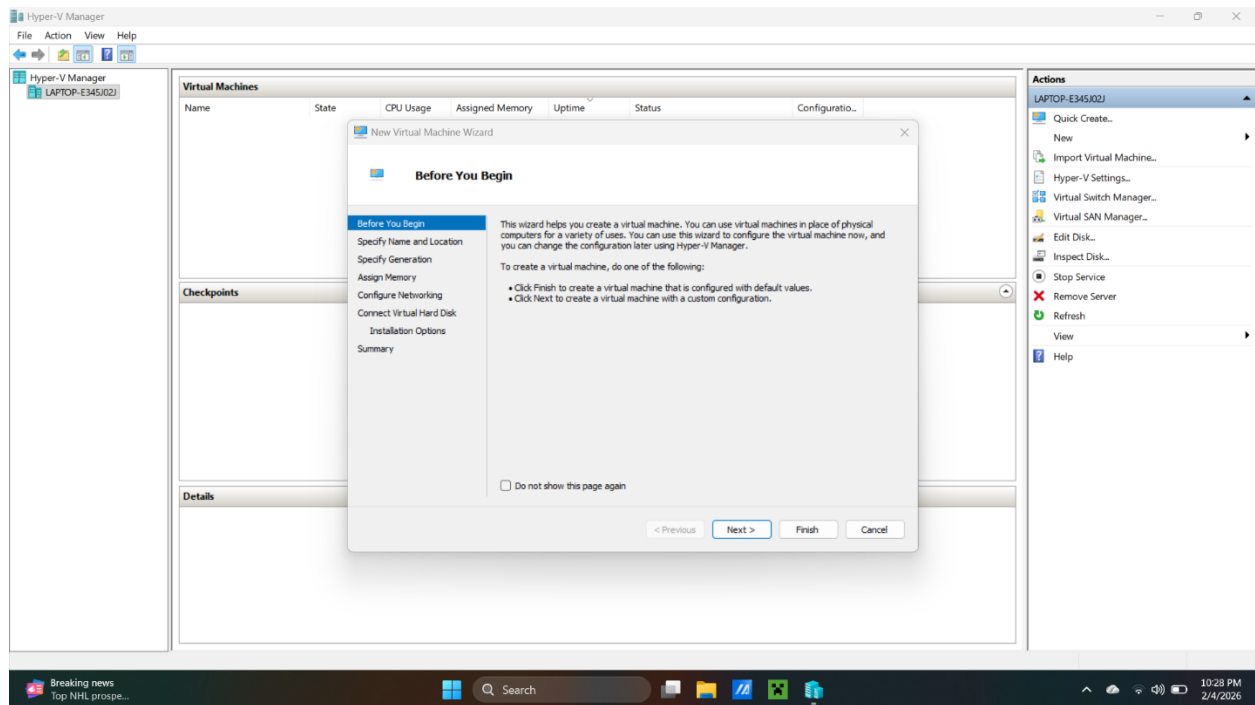

Following that, I named it as internet.

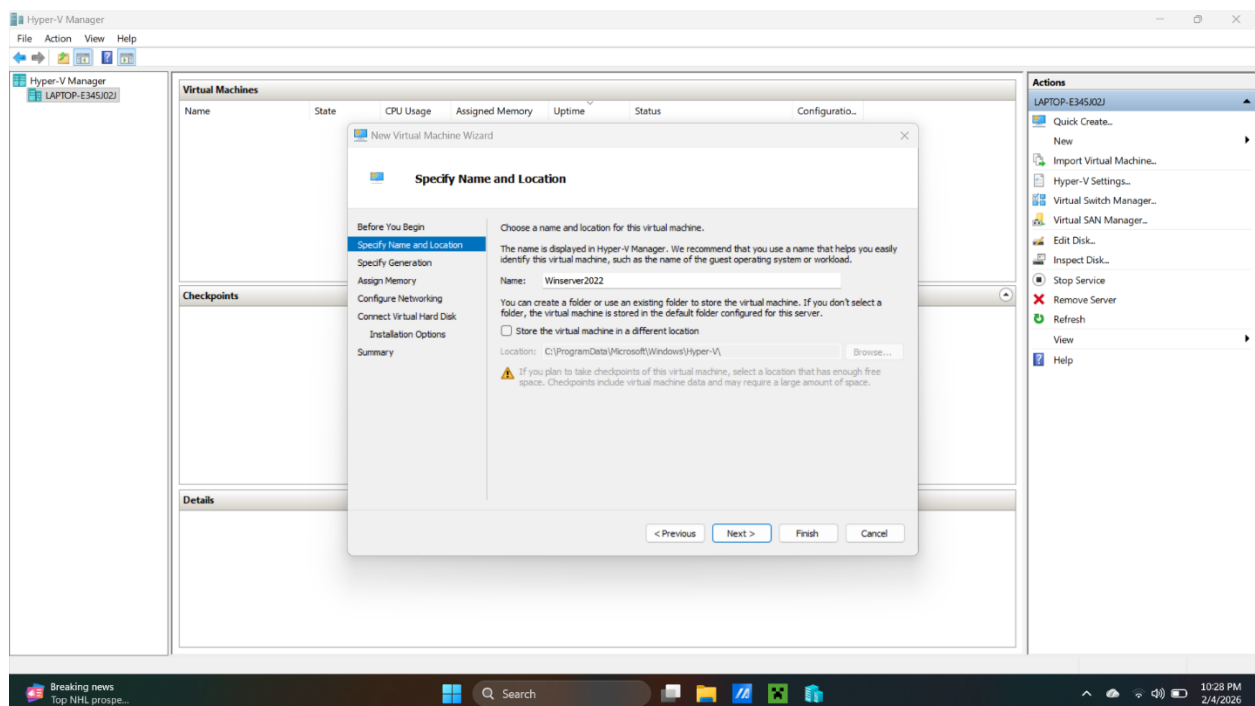

Creating virtual machines

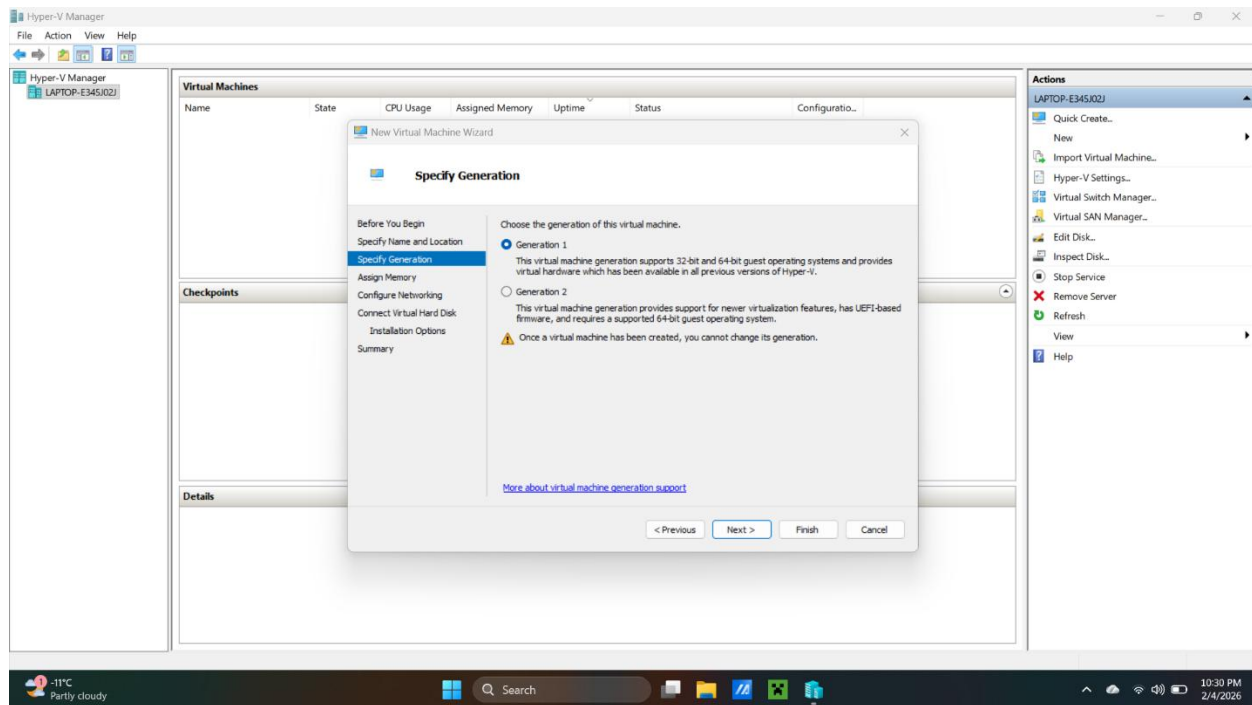

I clicked New in Hyper-V Manager to create a new virtual machine.

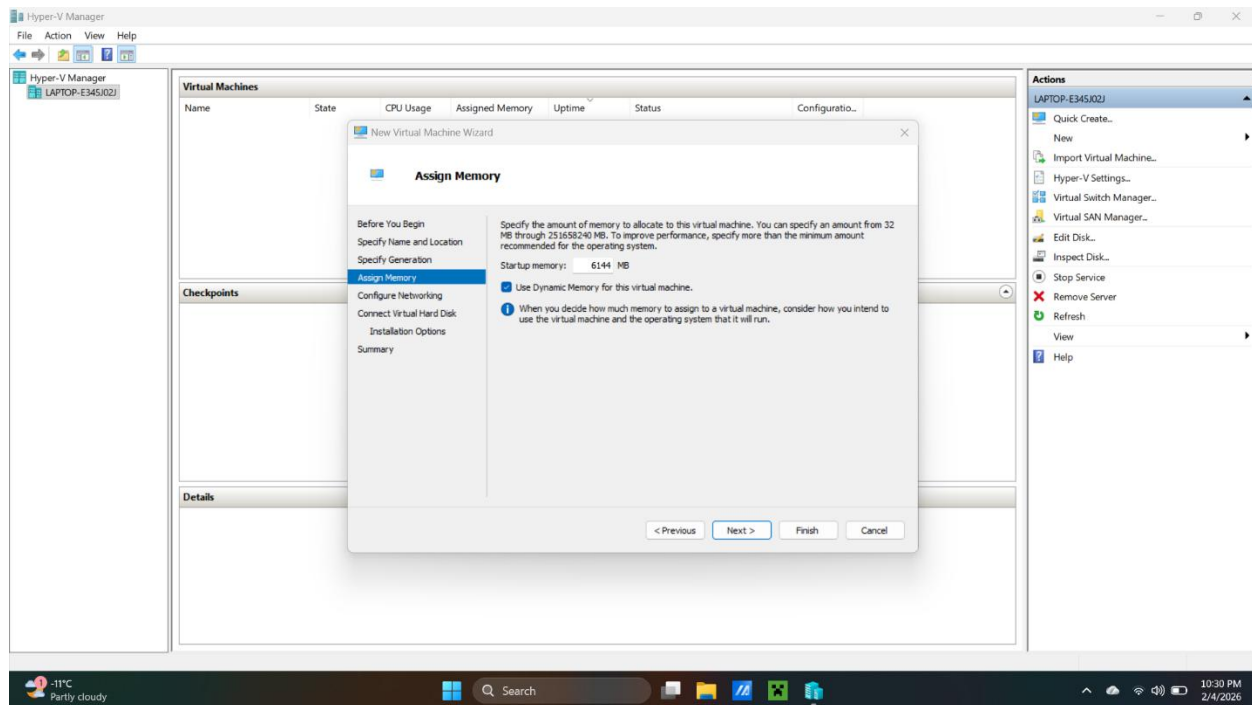

After that, I got new virtual machine wizard where I just clicked on next button.

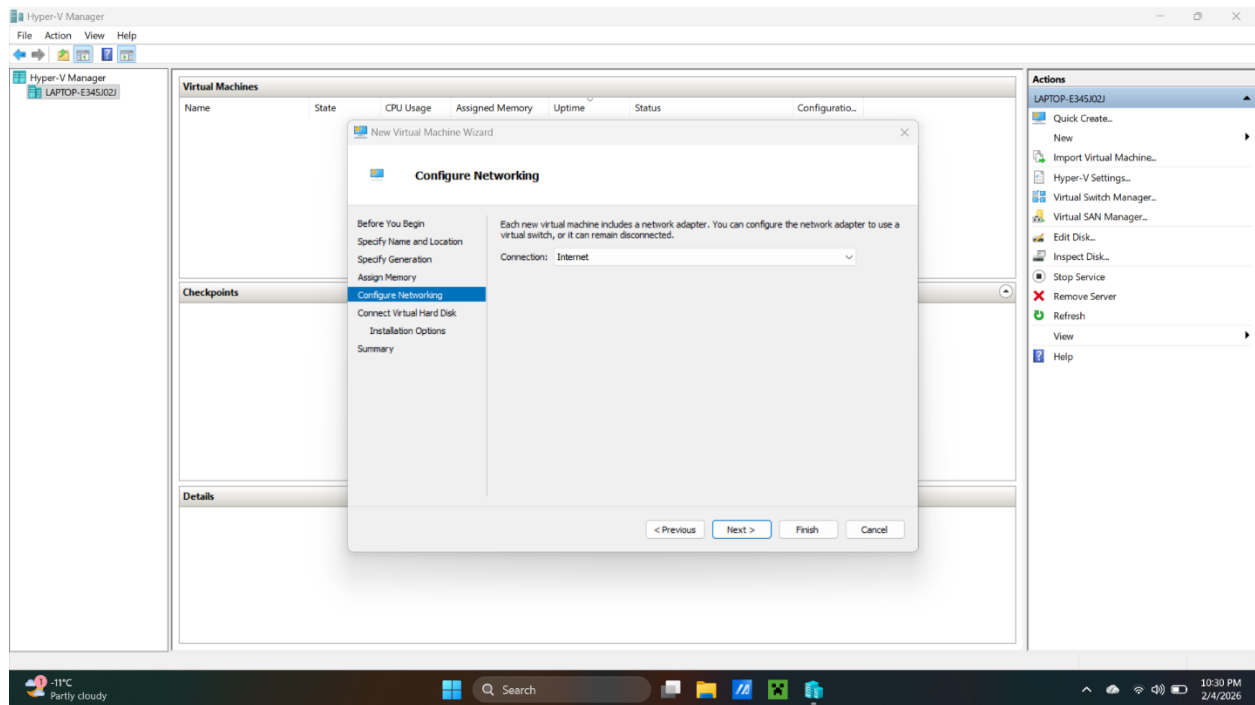

Then I named this server as Winsrvr2022.

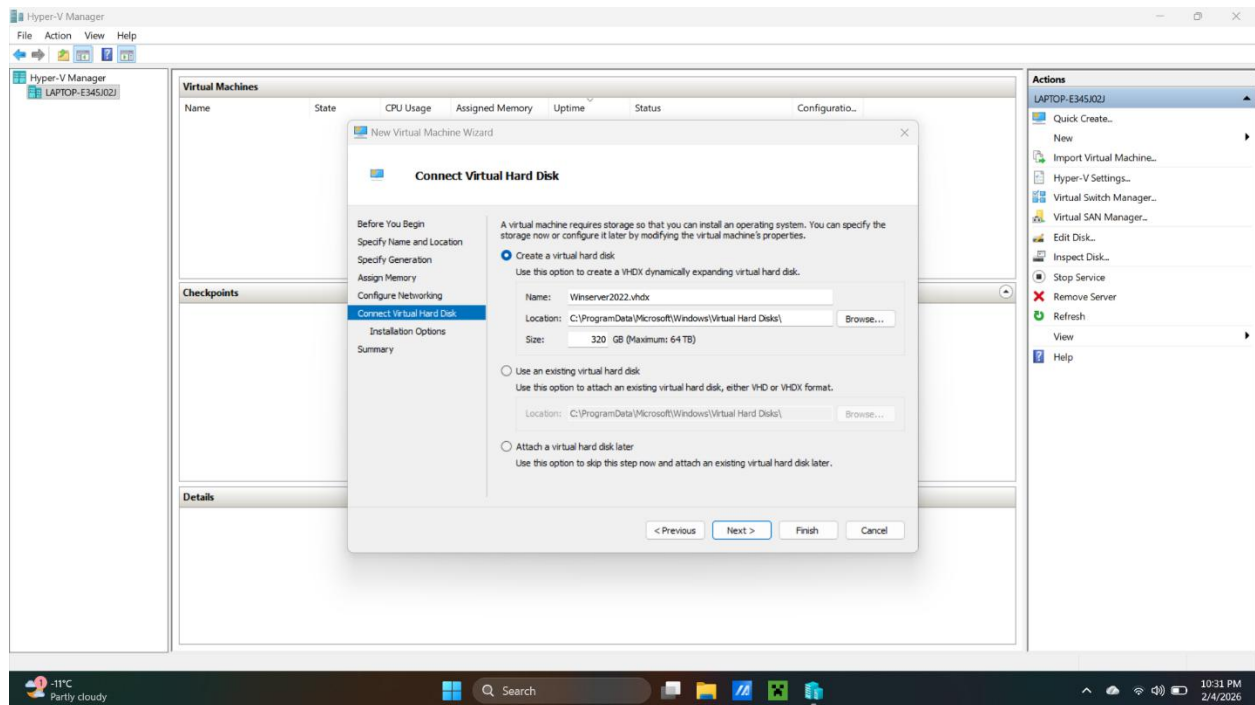

Then I selected generation of my server that is generation 1.

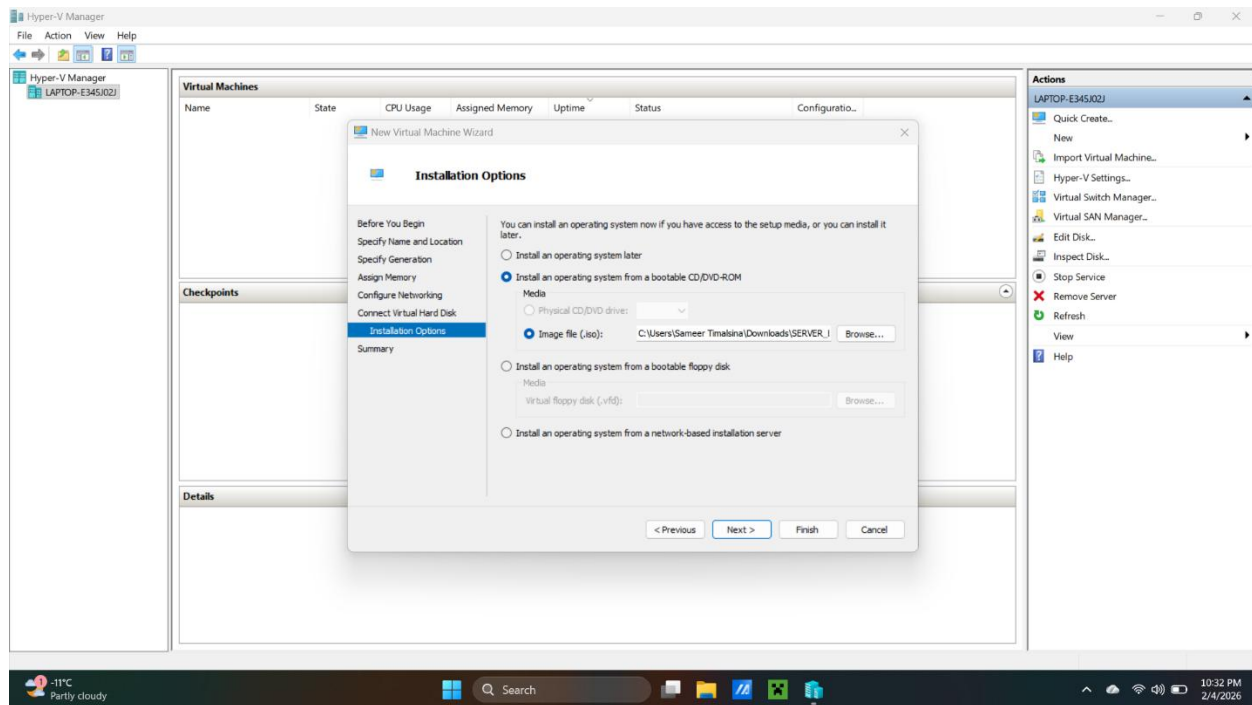

Then, I allocated memory for my server to be 6GB.

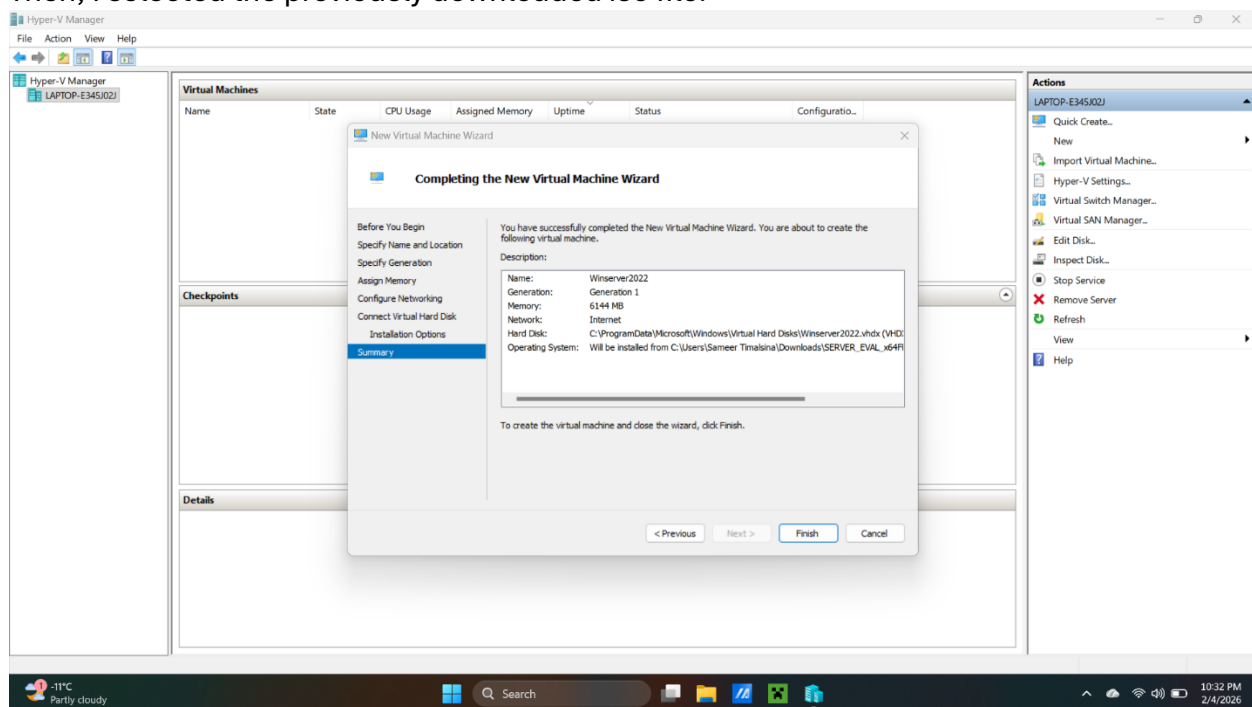

After assigning memory, I selected internet as my switch which I have created earlier.

After that, I allocated size of the virtual hard disk for it.

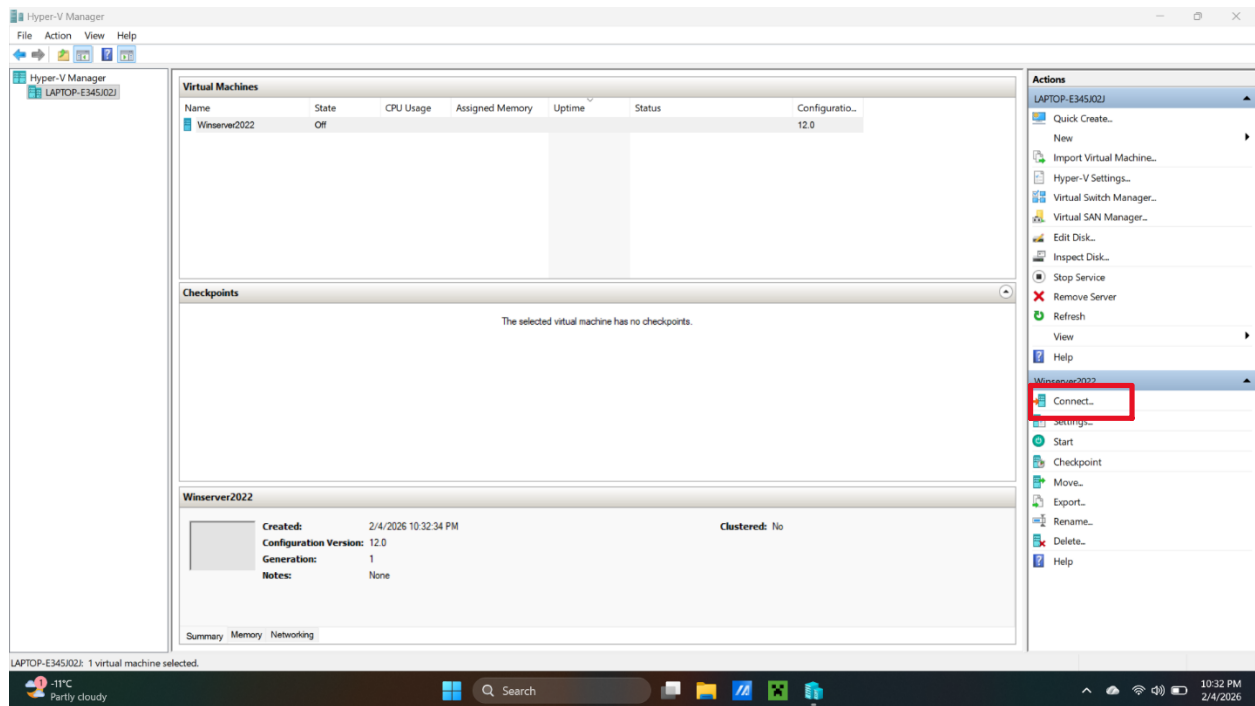

Then, I selected the previously downloaded iso file.

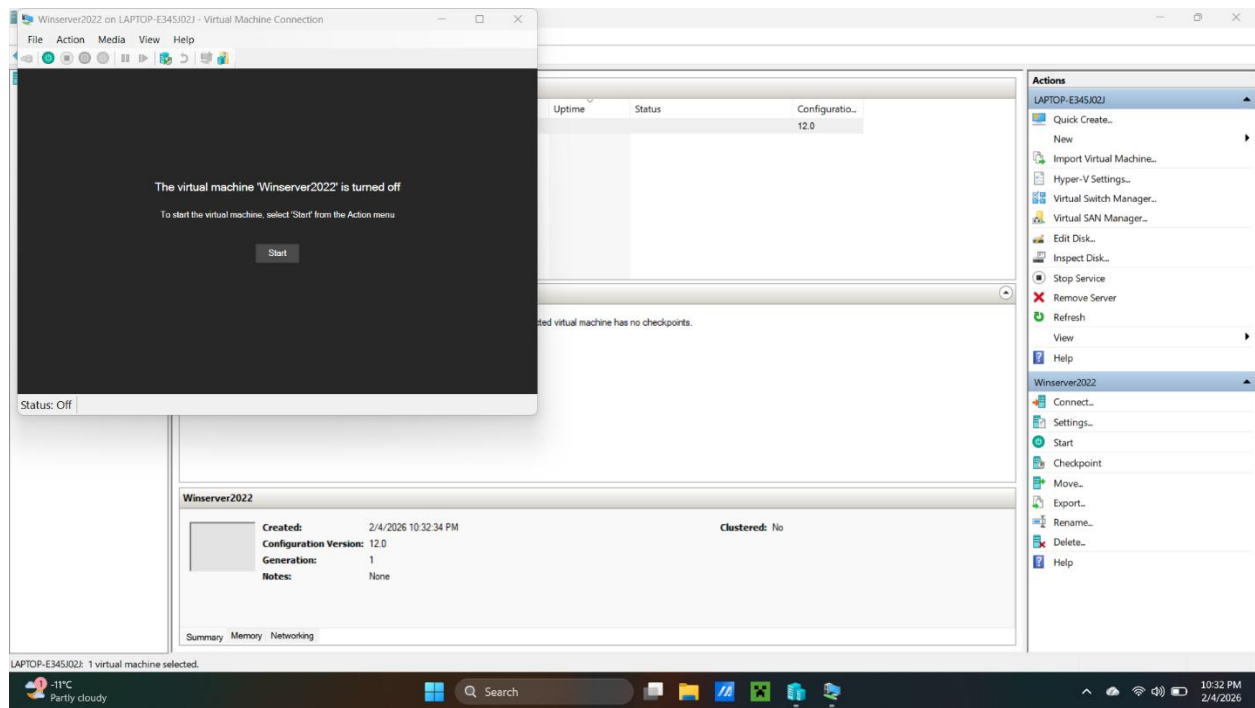

Here, this is the summary of the virtual machine which I have specified just now with installation wizard. To created finished the creating virtual machine, here I clicked on finish button.

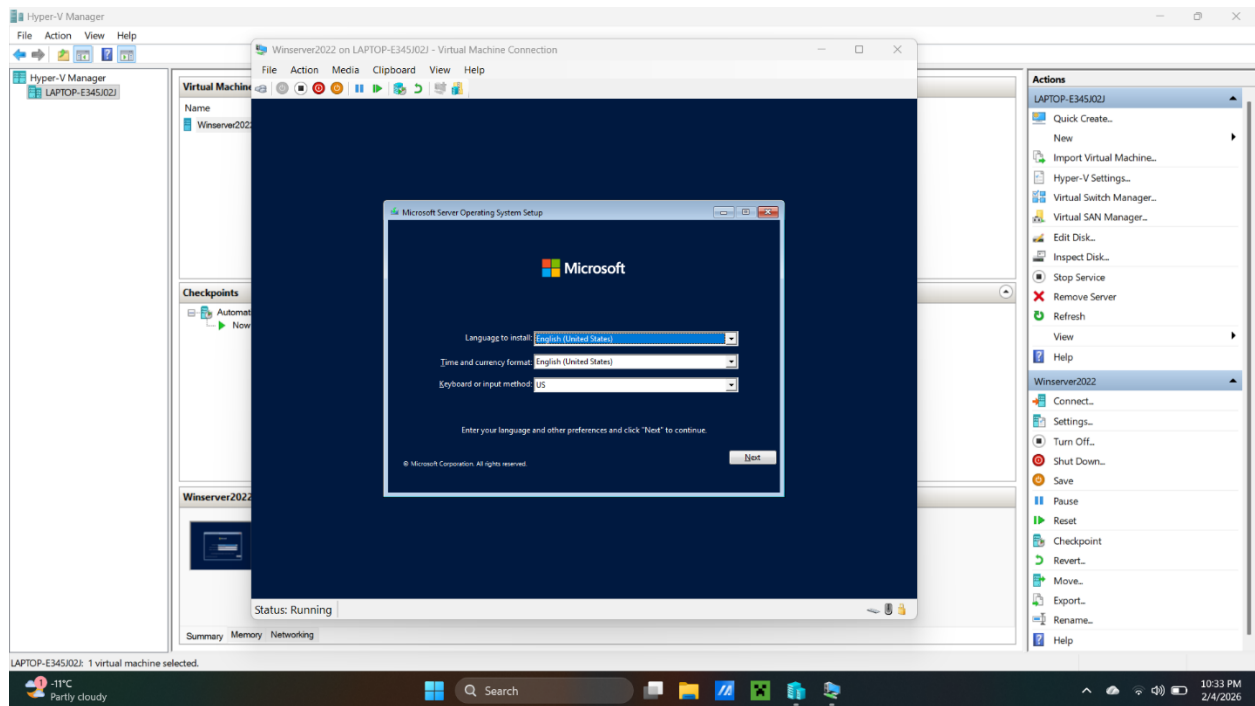

Installing windows server 2022 in virtual machine

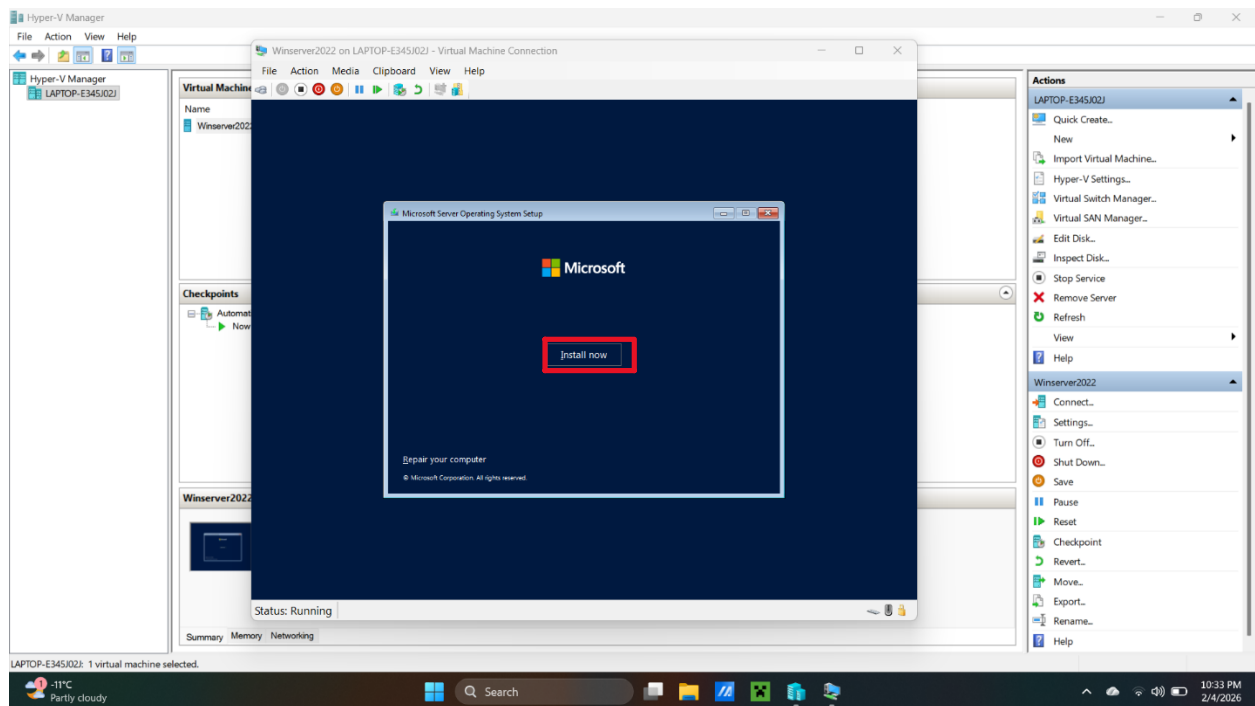

Then, I clicked on connect button to start the virtual machine.

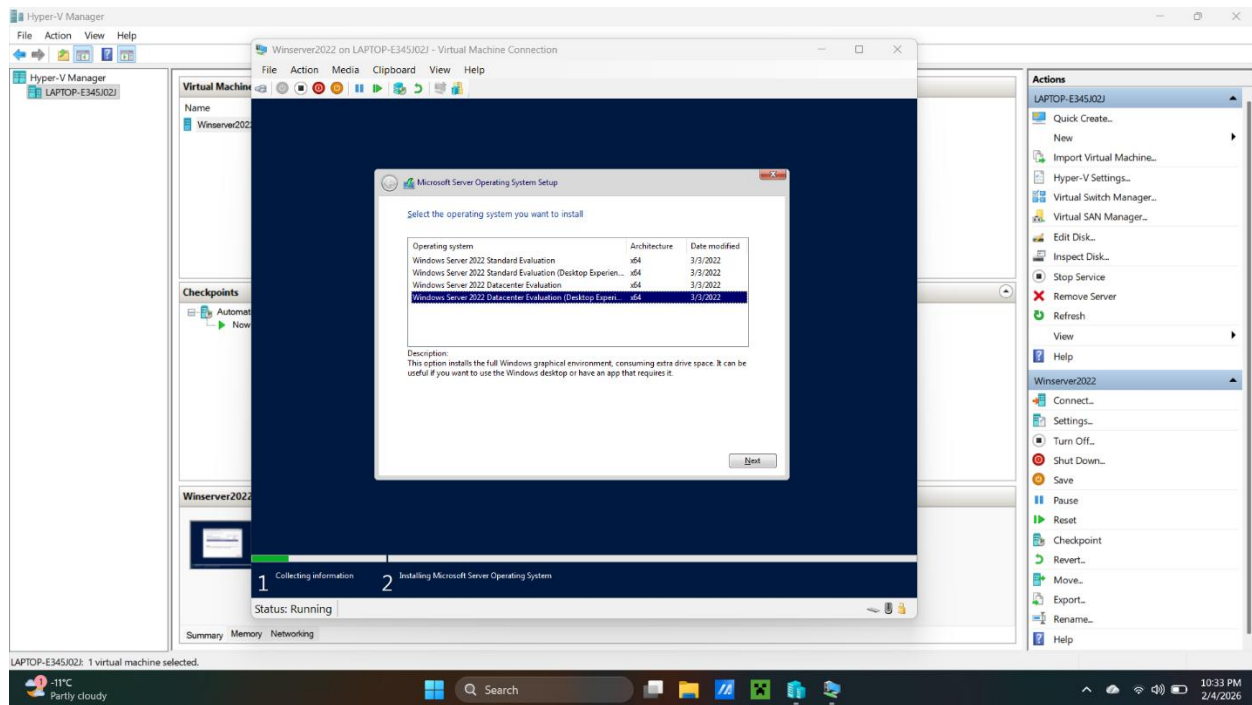

Then, I clicked on start button to start it.

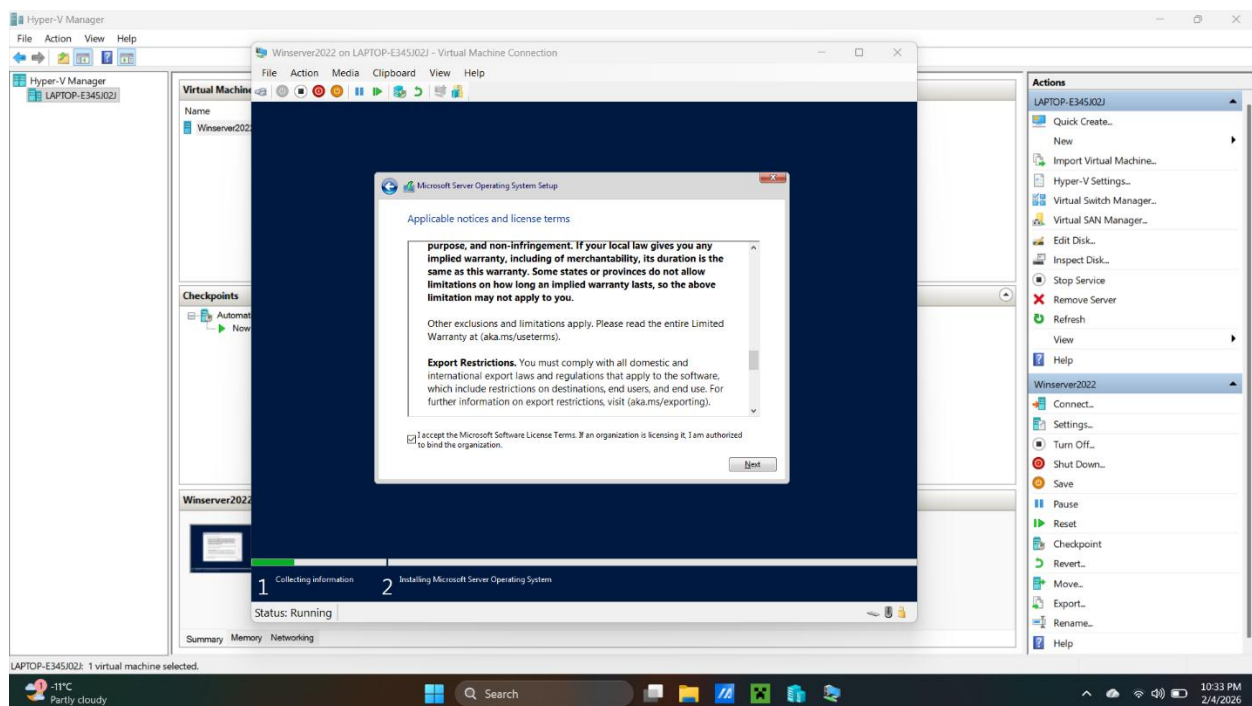

After that server setup interface begins, here I clicked on next button.

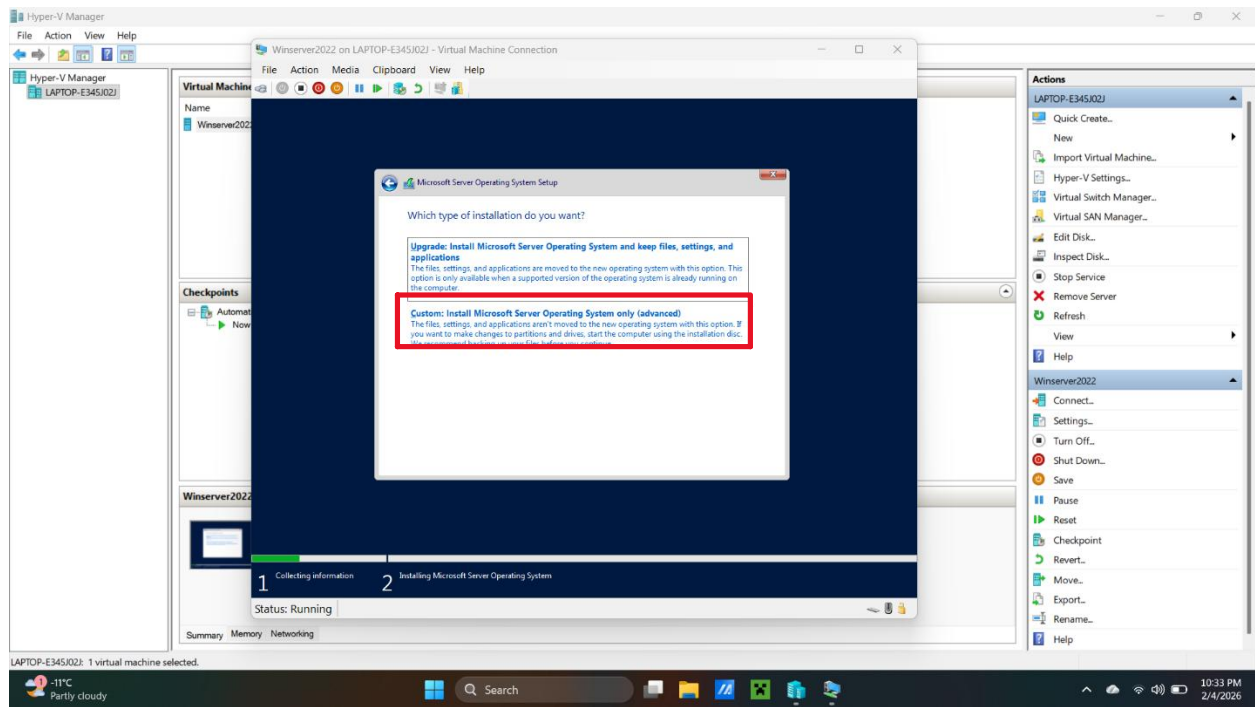

After that, I clicked on install now button.

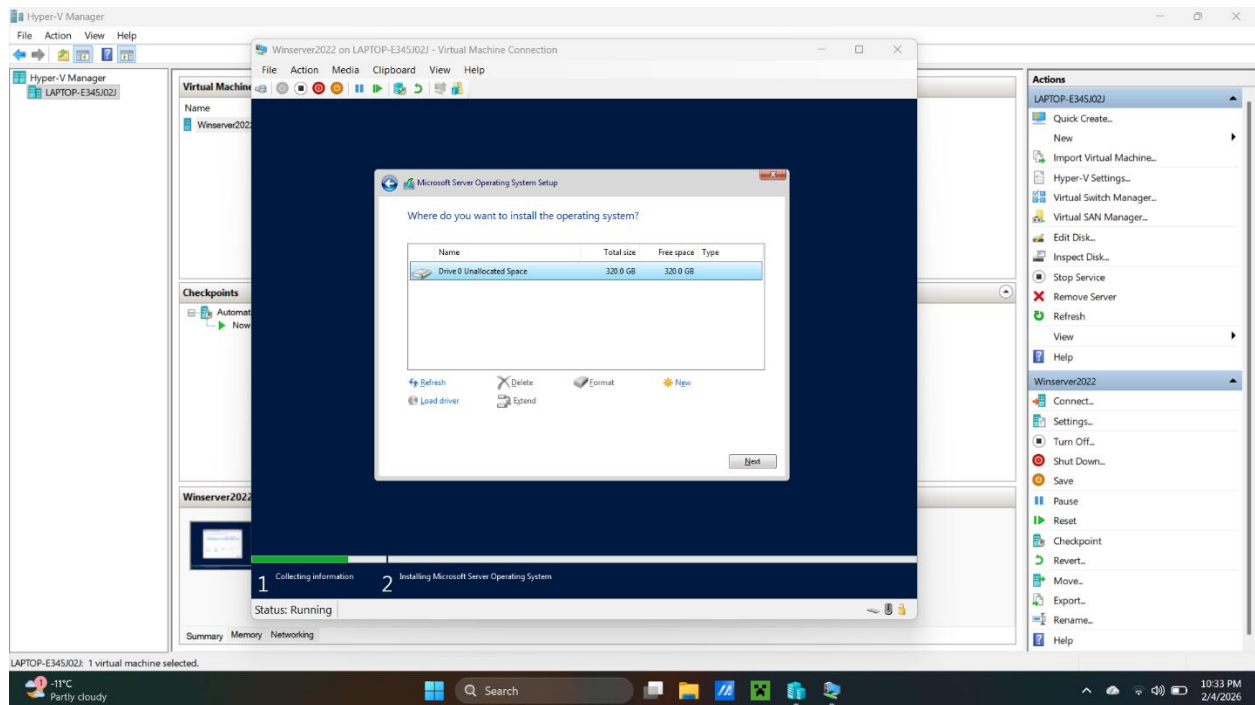

Then, I clicked on required server for me. Here, I chosen windows server 2022 datacenter desktop edition.

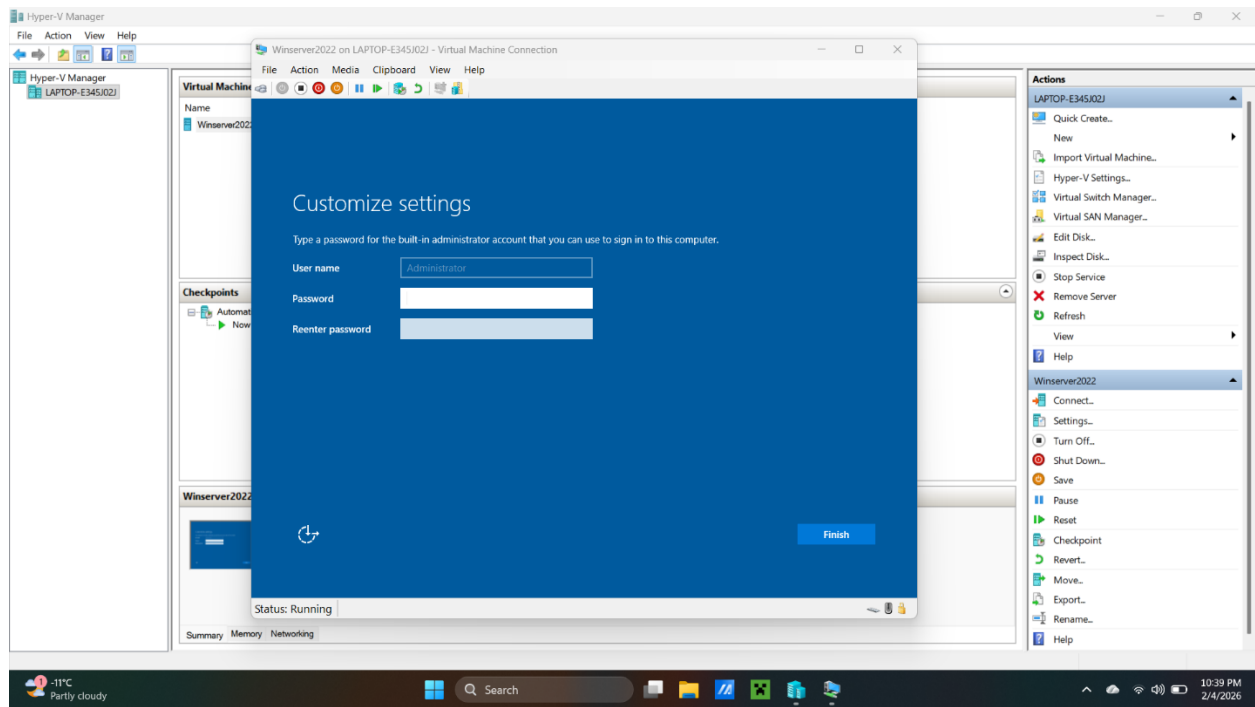

Then, I accepted the term and condition and clicked on the next button.

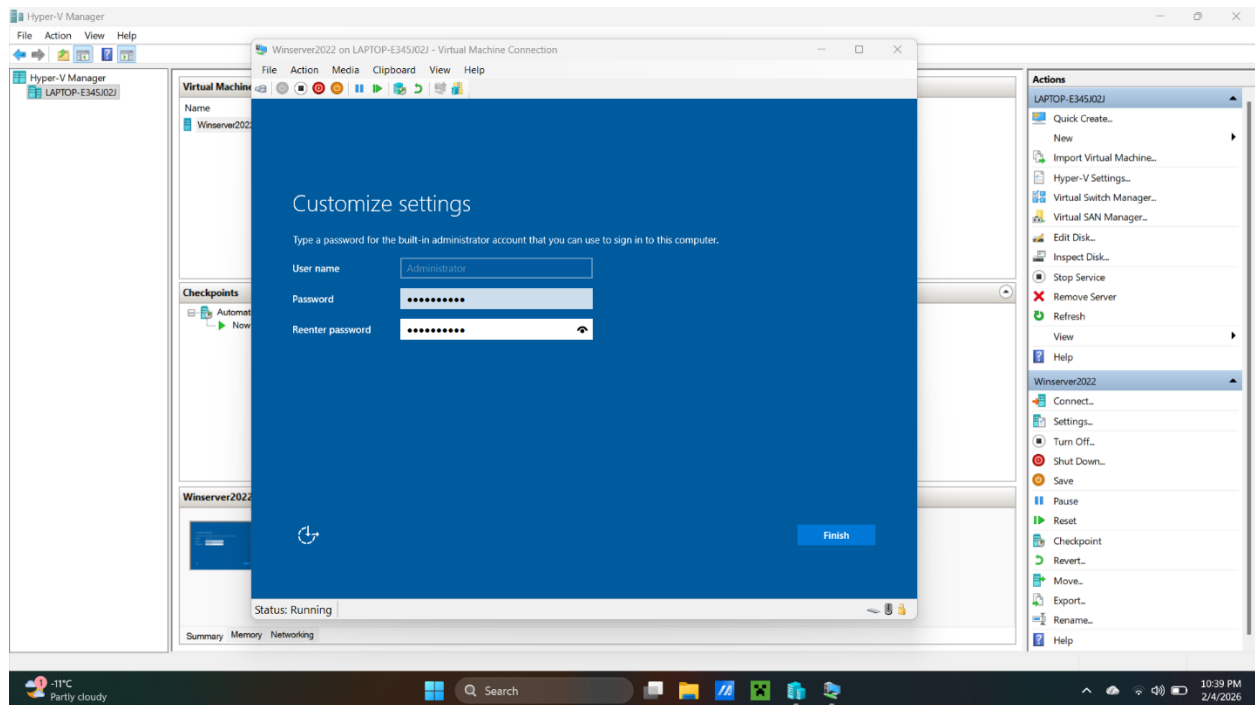

Then, I selected custom install Microsoft server OS.

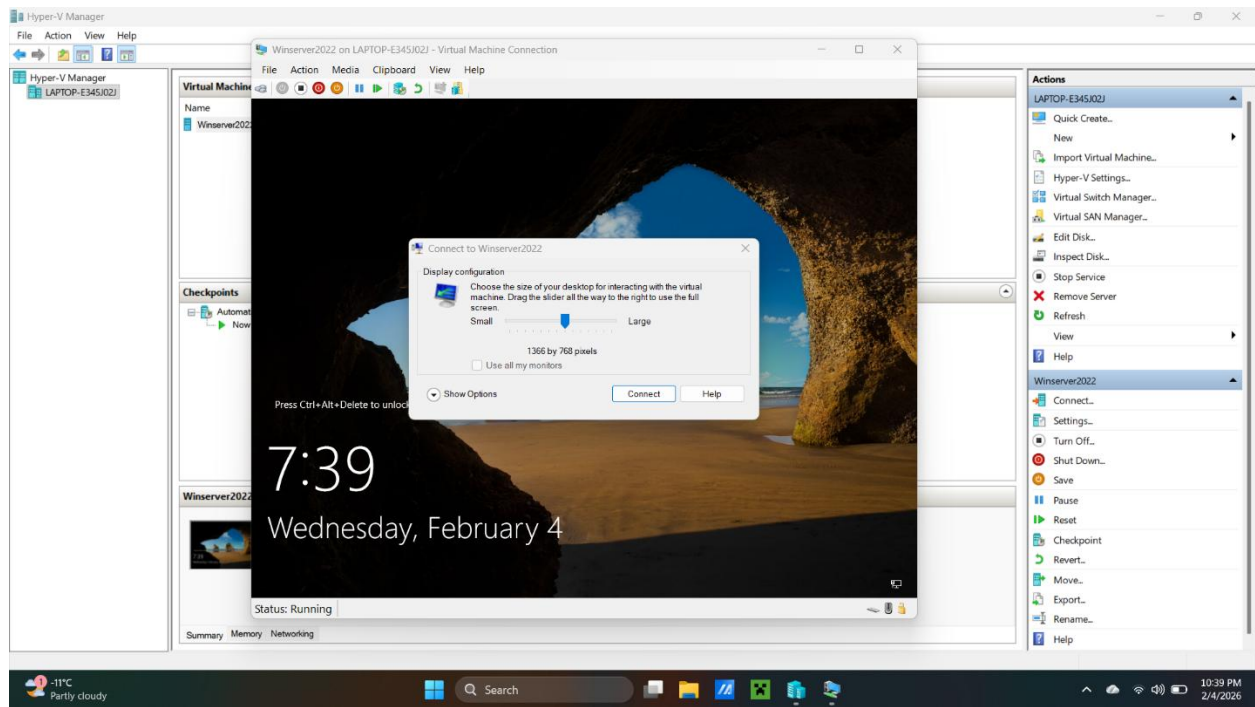

Here, partition of hard drive can be done. However, I just clicked on next button.

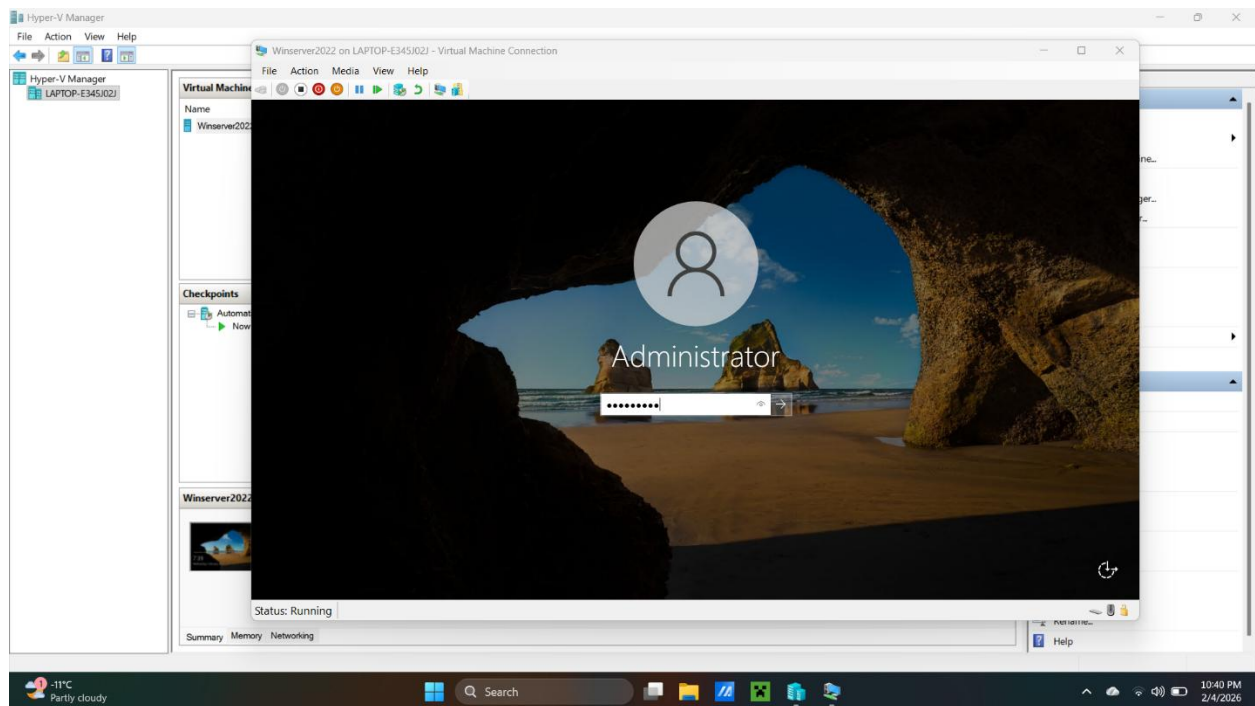

After system restarts, this interface pops up.

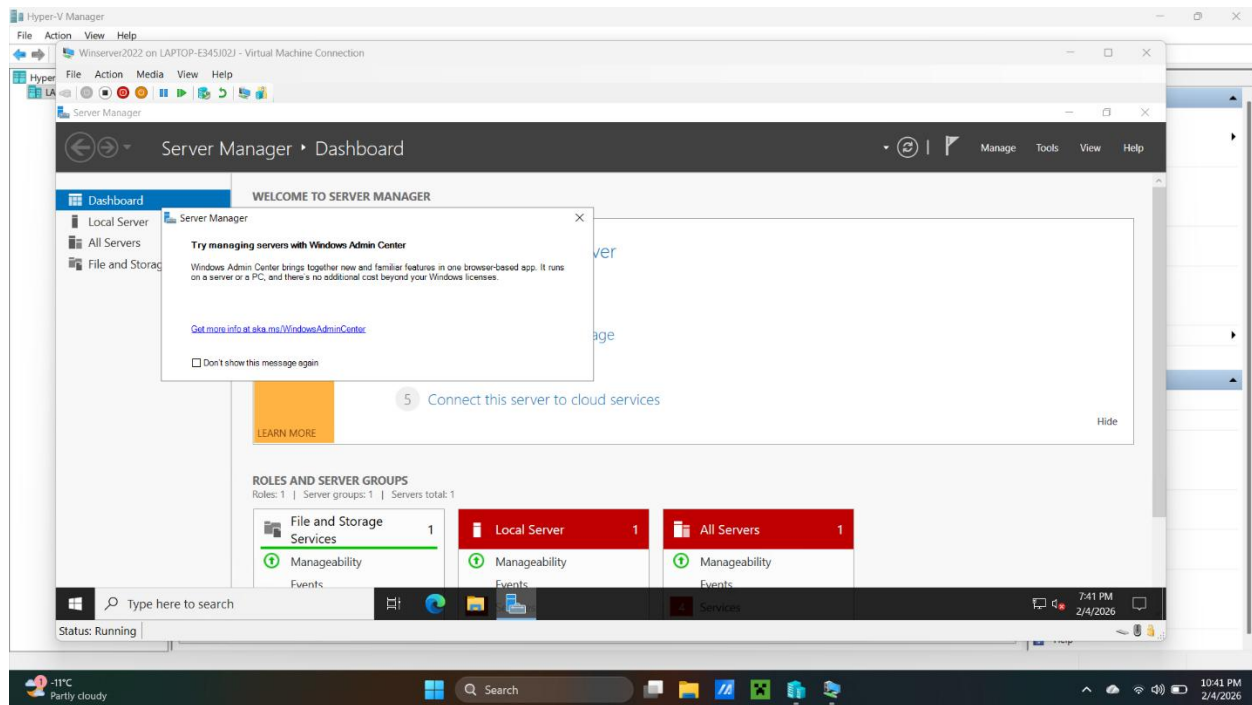

Then, I entered password for my system and clicked on finished button.

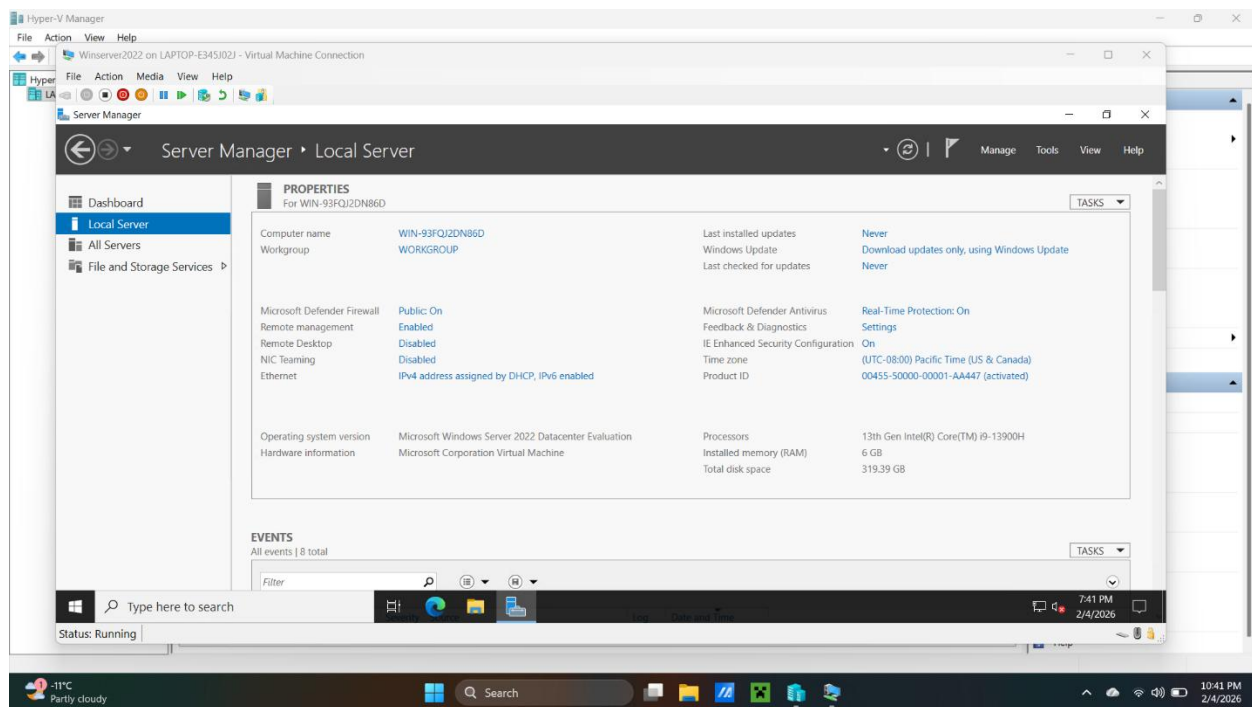

After that, this interface can be seen where I can choose the size of my window for the virtual machine.

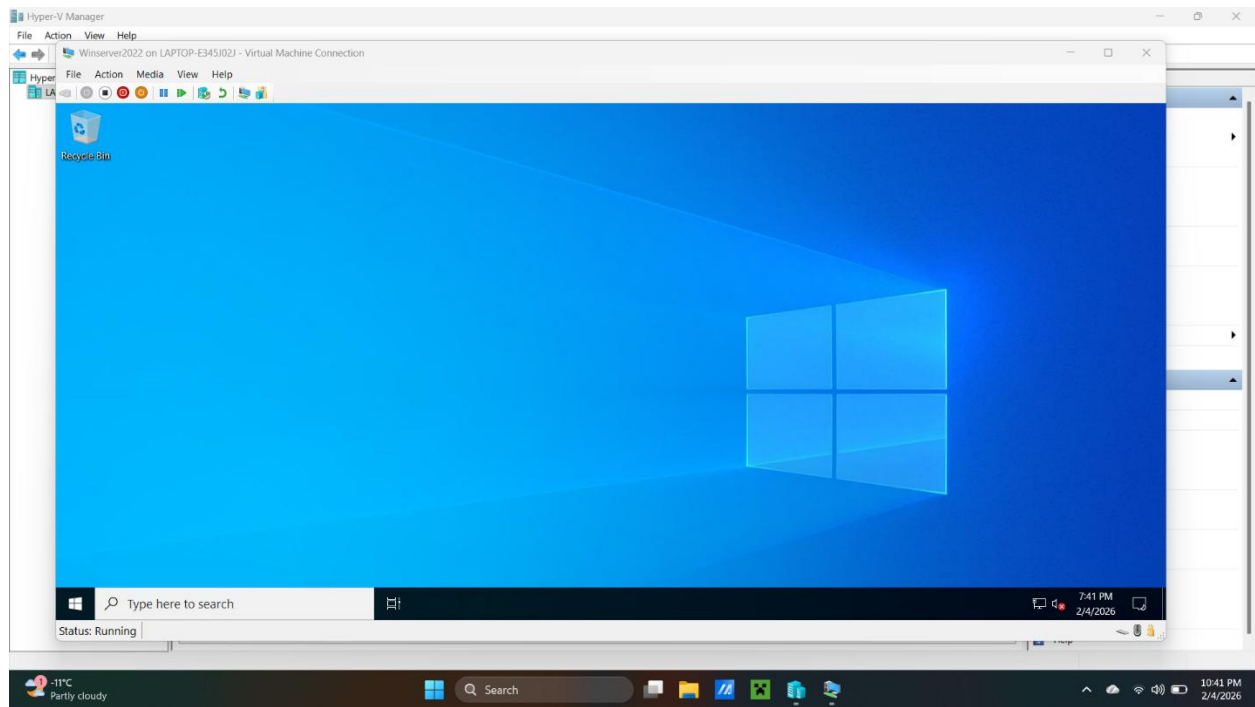

Then, I entered password for my server which I had created earlier.

Then, server dashboard can be seen.

This is the server which has created, it's all the information about the server just like a summary.

This is the desktop server view of server which I have created.

Conclusion

In conclusion, up to now I have just installed windows server 2022.
